

# COLQUICK

PRODUCT WITH SPECIFIC ACTION

Inoculation of mycorrhizal fungi

PERMITTED IN ORGANIC FARMING

## BIOAGRONOMIC CHARACTERISTICS

COLQUICK is a product that allows to improve and increase the availability of nutrients in plants. The use of this product allows the plant to optimize the functioning of the products that are combined.

COLQUICK, given its characteristics, allows a better photosynthetic activity of the plant by providing a nitrogenous nutrition, allowing the microbiological system to create a well-being to the vegetative apparatus.

## DOSES AND METHOD OF USE

Application type: FOLIAR

It can be used on all crops both in open ground and in greenhouses:

Vine area: 2-3 kg/ha

Arboreae, olive: 2-4 kg/ha

Cereals: 2-3 kg/ha

Horticulture: 1-3 kg/ha

Flowers: 2-3 kg/ha

Nurseries and Meadows: 2-4 kg/ha

At minimum dosage or may reduce the dosage of insecticides.

**APPLICATIONS** • It should be applied during the hot hours of the day in spring and autumn, in hot periods it is advisable to apply in the evening hours. It does not create problems in the flowering phase of crops.

It is recommended to apply the product with temperatures above 20 degrees for greater assimilation and functionality.

**WARNINGS** • *The product is miscible with most pesticides other than products containing copper or antibacterials. It is however necessary, in any case, to perform a test before application. The manufacturer is not liable for damage caused by improper use of the product.*

## COMPOSITION

Type of organic soil improver:  
simple non-composted  
vegetable soil improver

- Mycorrhizae content 0.1%
- Rhizosphere bacteria content  $10^7$  CFU/gr

## FORMULATION

DUST

## PACKS

1 – 5 – 10 kg
